

4-4: Explaining Recommendations

Introduction to Recommender Systems

Key Reference

- Explaining Collaborative Filtering Recommendations by Herlocker, Konstan, and Riedl (Proc. CSCW 2000)
 - Several dozen more recent papers look at specific aspects – transparency, trust, computing efficient explanations, and more ...

Introduction to Recommender Systems

Learning Objectives

- To understand the variety of ways that explanations are made in recommender systems, and how users react to them.
- To understand how explanations can fit into a recommender system
- To recognize pitfalls in explanation – and particularly the difference between explanation and persuasion

Introduction to Recommender Systems

What is an Explanation?

- Additional data to help users understand a specific recommendation
 - Separate from an explanation of how the system works as a whole
 - Some explanations are confidence scores
- Often a glimpse inside the computation
 - More detail than a simple prediction score ...
 - Predictions don't distinguish normal from weird distributions
- Sometimes tied to ability to edit profile to improve recommendations ...

Introduction to Recommender Systems

Let's take a look at Herlocker ...

- Key lessons
 - Simplicity is key – users didn't like “correlation,” statistical terms, or being overwhelmed with data
 - Simple visualizations work well – histogram, table
 - Supporting information valued – historical success, attribute-linked data, associations
- One key mistake
 - We didn't actually measure explanation effectiveness, but rather persuasiveness

Introduction to Recommender Systems

Take-Away

- You've now seen several types of explanation:
 - More data on the prediction itself
 - Other data about the item
 - Simplified presentations of relevant data
 - Past performance data
 - Supporting statistics
- You now have some experience with which explanations work with ordinary users ...

Introduction to Recommender Systems

Explanations in Practice

- We saw Amazon.com earlier
- “Why?” is a compelling anchor
- Tell me more provides user control
- Be careful, though – overwhelming the user is rarely a good strategy
- Explanations not only for user-user CF
- Mostly open area: explaining “lists” vs. items

Introduction to Recommender Systems

Moving Forward

- Next
 - Interviews related to trust, reputation, influence of bad ratings, alternative ways to focus on trusted sources or limit unknown ones
 - Assignments related to user-user recommendation
 - Next module focuses on evaluation – will also provide new metrics that could help with explanation!
